An Unearthly Child

Dear Dr. Who,

I am writing to apply for this Data Science position because I believe my educational background and working experience make me a qualified candidate for this position. I am a Ph.D. candidate with with the purpose of integrating my skills and knowledge to this industry.

I have studied the major of Bioinformatics, that is the application of Computer and Data Sciences to biological data, since I finished my Bachelor's degree. After getting my bachelor's degree, I won a scholarship to continue with my M.Sc. and Ph.D. at UNAM, which is the top university in Mexico and worldwide recognized. As a graduate student researcher, I participated in different projects using modern genomic technologies and Data Science applied to biological data to obtain novel information.

Having studied the job description, I am confident that I have the skills, qualities, and qualifications needed to excel in the role. Additionally, I consider myself a fast learner and could quickly adapt to your company. If I don't know something, I always look for a way to learn it. I possess excellent problem-solving capabilities, and I can manage a significant workload or several projects from different areas without losing track of each of them. For example, I participated in several research projects, managed the server, the GitHub account, and the scripts for those projects. Also, I am familiar with working remotely, so it wouldn't be such a difficult transition for me.

I attached my CV and my personal webpage, where you can see my portfolio and publications. Thanks a lot for your attention, and I look forward to being in touch with you in the future. Best regards,

Luigui Gallardo-Becerra
